

CT-2098

Reverse Osmosis Membrane Alkaline Cleaner

Introduction

CT-2098 contains: phosphate, phosphonate derivatives, chelating agent, dispersing and surfactant agent. It is specially designed to remove colloidal fouling, organic, silt, and biofilms from ultra filtration and polyamide thin composite membrane surfaces. It is highly effective formulation where other products have failed or produced limited results.

Physical Properties

Appearance.....	Florissant greenish liquid
S.G.....	1.07 ± 0.02
PH.....	10 (3% sol.)
Flash Point.....	Nonflammable
Odor.....	Odorless
Solubility.....	Completely soluble

Application

Water used to prepare the solution must be free from residual chlorine or other oxidizing agents using CT-2099. The dilution ratio depends on the degree of fouling substances. The specific dosages and procedure for cleaning will be specified by our technical representative who can also assist you during the implementation of the cleaning.

Safety and Handling

Wash contaminated cloth before re-use. Wash thoroughly after handling.

Storage

- Store in a cool, dry and well ventilated area.
- Keep containers closed all time.

Packaging

CT-2098 is available in 25 kg plastic containers.
